

Adding, Subtracting
Negatives & Positives

FABULOUS FIFTY

Materials needed:

3 dice
paper
pencil/pen

The first player rolls 2 dice and adds the numbers shown on the top of the dice. Then the player rolls the 3rd die and subtracts that number from the sum of the other dice. The player then records the answer.

If the 3rd die is greater than the sum of the other 2 dice, then the player has a negative number and goes in the hole for that round.

Play continues until someone reaches the score of 50 points.

If the player makes a mistake, one of the other players may challenge the player and if the answer was wrong has to give the challenging player 10 points.
